In physics, motion is the change in position of an object with respect to its surroundings in a given interval of time. Motion is mathematically described in terms of displacement, distance, velocity, acceleration, and speed. Motion of a body is observed by attaching a frame of reference to an observer and measuring the change in position of the body relative to that frame.

No discussion of evolution seems complete without bringing up the topic of the human eye. Despite its deceptively simple anatomical appearance, the human eye is an incredibly complicated structure. Even in this age of great scientific learning and understanding, the full complexity of the human eye has yet to be fully understood.

A GAME OF BACKGAMMON starts when both players each roll one die and the player who rolls the higher number goes first. The winner then plays the two numbers just rolled. In the case of a tie, both dice are rethrown. That means it's not possible to roll doubles as the first roll of a game. Here are the fifteen possible opening rolls:
