Transaction per second (TPS) is the number of transactions executed per second. In other words, it can be calculated based on how many transactions are executed over a certain duration of the test and then calculate it for a second. For example, if a vuser executes 6 transactions every minute, then the TPS would be...

Your understanding is correct. The ApplicationContext is where your Spring beans live. The purpose of the ContextLoaderListener is two-fold:.. to tie the lifecycle of the ApplicationContext to the lifecycle of the ServletContext and.. to automate the creation of the ApplicationContext, so you don't have to write explicit code to do create it - it's a convenience function.

Bobby, The "this" you are inquiring about is referring to the window object, which is the global window object that all the code is defined on.. In the apply function, the first argument sets the use of the "this" keyword. So this line: f.apply(this, arguments); is saying: call the f function and use the window object as the this keyword inside the f function.
