640x480 "VGA" resolution is the lowest-common-denominator - by definition all PC's, graphics adapters and monitors must support at least VGA. Because it's the one thing that can be counted on to work, and always work regardless of your hardware selection, it's often used as the fallback when troubleshooting, or the default if your computer doesn't know it can do any better.

### Why is 640x480 my only resolution option? - Ask Leo

Resolution independence is where elements on a computer screen are rendered at sizes independent from the pixel grid, resulting in a graphical user interface that is displayed at a consistent size, regardless of the resolution of the screen.
