In vector calculus, a conservative vector field is a vector field that is the gradient of some function. Conservative vector fields have the property that the line integral is path independent, i.e., the choice of any path between two points does not change the value of the line integral. Path independence of the line integral is equivalent to the vector field being conservative.

In mathematics, a tensor is a geometric object that maps in a multi-linear manner geometric vectors, scalars, and other tensors. Vectors and scalars which are often used in elementary physics and engineering applications are the simplest tensors. Vectors from the dual space of the vector space, which supplies the geometric vectors, are also included as tensors.
