We have previously learned that visible light waves consist of a continuous range of wavelengths or frequencies. When a light wave with a single frequency strikes an object, a number of things could happen. The light wave could be absorbed by the object, in which case its energy is converted to heat ...

1- Diagnose with a meter. This step is the key to a successful mitigation. Even if you know you are bothered by a specific device (your wifi router for example), there will surely be other sources of EMF in your environment which are contributing to your exposure burden, and so raising your overall sensitivity.. EMF Meters are easy to use and are affordable, and they are the only way to ...

Reflection: If an object does not emit its own light, it must reflect light in order to be seen. Reflection involves two rays - an incoming or incident ray and an outgoing or reflected ray. If we draw a line perpendicular to a flat surface, this line is said to be the normal. A ray of light that hits this surface is called the incident ray. This ray of light hits the surface and bounces off ...

Color perception, like sound perception, is a complex subject involving the disciplines of psychology, physiology, biology, chemistry and physics. When you look at an object and perceive a distinct color, you are not necessarily seeing a single frequency of light. Consider for instance that you are looking at a shirt and it appears purple to your eye.
