HSAB concept is an initialism for "hard and soft (Lewis) acids and bases".Also known as the Pearson acid-base concept, HSAB is widely used in chemistry for explaining stability of compounds, reaction mechanisms and pathways. It assigns the terms 'hard' or 'soft', and 'acid' or 'base' to chemical species. 'Hard' applies to species which are small, have high charge states (the charge criterion ...

In chemistry, yield, also referred to as reaction yield, is the amount of product obtained in a chemical reaction. The absolute yield can be given as the weight in grams or in moles (molar yield).The percentage yield (or fractional yield or relative yield), which serves to measure the effectiveness of a synthetic procedure, is calculated by dividing the amount of the obtained desired product ...

Oil palm, currently the world's main vegetable oil crop, is characterised by a large productivity and a long life span (≥ 25 years). Peak oil yields of 12 t ha⁻¹ yr⁻¹ have been achieved in small plantations, and maximum theoretical yields as calculated with simulation models are 18.5 t oil ha⁻¹ yr⁻¹, yet average productivity worldwide has stagnated around 3 t oil ha⁻¹ yr⁻¹.

Label-free, real-time cell analysis in a 6 x 96-well format. The xCELLigence® RTCA MP instrument uses noninvasive electrical impedance monitoring to quantify cell proliferation, morphology change, and attachment quality in a label-free, real-time manner. The MP (multiple plate) model differs from our other xCELLigence® instruments in that it can host up to six 96-well electronic microtiter ...
