I have just acquired Zwiebach's "A first course in string theory". I am actually very busy with honours (4th year) coursework and research, so I cannot really get down to reading substantial chunks of it whenever I want to. Apparently, it covers (and maybe extends) the MIT undergraduate string theory course.

Zwiebach's book is pretty self-contained. I would say that you need a solid background in undergrad physics (i.e. Griffiths QM and EM). Other than that, he goes through most of the math that you need. You don't NEED relativity, but it will help you in the book. I would make sure I understood all of ...
