What are the best practices for naming unit test classes and test methods? This was discussed on SO before, at What are some popular naming conventions for Unit Tests?. I don't know if this is a very good approach, but currently in my testing projects, I have one-to-one mappings between each production class and a test class, e.g. Product and ProductTest.

How do I unit test (using xUnit) a class that has internal private methods, fields or nested classes? Or a function that is made private by having internal linkage (static in C/C++) or is in a private namespace?. It seems bad to change the access modifier for a method or function just to be able to run a test.
