Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a=0$), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

Statics - Wikipedia

Moment of inertia is defined as the ratio of the net angular momentum of a system to its angular velocity around a principal axis, that is $I = L/\omega$. If the angular momentum of a system is constant, then as the moment of inertia gets smaller, the angular velocity must increase.

La estática es la rama de la física que analiza las cargas: fuerza, par / momento y estudia el equilibrio de fuerzas en los sistemas físicos en equilibrio estático, es decir, en un estado en el que las posiciones relativas de los subsistemas no varían con el tiempo. La primera ley de Newton implica que la fuerza neta y el par neto (también conocido como momento de fuerza) de cada ...
