A circle is the set of points in a plane that are equidistant from a given point O. The distance r from the center is called the radius, and the point O is called the center. Twice the radius is known as the diameter $d=2r$. The angle a circle subtends from its center is a full angle, equal to 360 degrees or 2π radians. A circle has the maximum possible area for a given perimeter, and the ...

CCSS.Math.Content.5.MD.C.5.a Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volumes, e.g., to represent the associative property of ...

The space enclosed by an n -sphere is called an $(n + 1)$ -ball. An $(n + 1)$ -ball is closed if it includes the n -sphere, and it is open if it does not include the n -sphere.. Specifically: A 1-ball, a line segment, is the interior of a 0-sphere. A 2-ball, a disk, is the interior of a circle (1-sphere). A 3-ball, an ordinary ball, is the interior of a sphere (2-sphere).

Topologically, a torus is a closed surface defined as the product of two circles: $S^1 \times S^1$. This can be viewed as lying in C^2 and is a subset of the 3-sphere S^3 of radius $\sqrt{2}$. This topological torus is also often called the Clifford torus. In fact, S^3 is filled out by a family of nested tori in this manner (with two degenerate circles), a fact which is important in the study of S^3 as a ...

A more scientific approach would be to compare the macroscopic physical properties of the three

states of matter, but even here we run into difficulty. It is true, for example, that the density of a gas is usually about a thousandth of that of the liquid or solid at the same temperature and pressure; thus one gram of water vapor at 100°C and 1 atm pressure occupies a volume of 1671 mL; when ...

As a special case of the distance formula, suppose we want to know the distance of a point (x,y) to the origin. According to the distance formula, this is $\sqrt{(x-0)^2+(y-0)^2}=\sqrt{x^2+y^2}$.

Related Surface Area Calculator | Area Calculator. Volume is the quantification of the three-dimensional space a substance occupies. The SI unit for volume is the cubic meter, or m³. By convention, the volume of a container is typically its capacity, and how much fluid it is able to hold, rather than the amount of space that the actual container displaces.
