In a previous part of this lesson, the motion of a mass attached to a spring was described as an example of a vibrating system. The mass on a spring motion was discussed in more detail as we sought to understand the mathematical properties of objects that are in periodic motion. Now we will investigate the motion of a mass on a spring in even greater detail as we focus on how a variety of ...

Longitudinal Waves-- In a longitudinal wave, the motion of the medium is parallel to the direction of the wave. This means that the particles move left and right which in turn makes the other particles start to oscillate.

What is the difference between longitudinal and transverse ...

Energy. Energy is an abstract concept that requires lots of discussion with students about physical observations and their interpretation. We begin with simple experiments that introduce the language of energy, and go on to include more advanced topics such as the energy shared amongst the particles of matter - the internal energy in hot objects, often called 'heat'.
