A voxel represents a value on a regular grid in three-dimensional space. As with pixels in a bitmap, voxels themselves do not typically have their position (their coordinates) explicitly encoded along with their values. Instead, rendering systems infer the position of a voxel based upon its position relative to other voxels (i.e., its position in the data structure that makes up a single ...

Step 4: Preparing the bleach Theory: Commercial bleach is approximately 5.25% NaClO by mass (approx 0.7M) and is too concentrated to titrate with the 0.2M thiosulfate solution. It is advisable to dilute the bleach by a factor of 1 in 10.

Volume rendering is distinguished from thin slice tomography presentations, and is also generally distinguished from projections of 3D models, including maximum intensity projection. Still, technically, all volume renderings become projections when viewed on a 2-dimensional display, making the distinction between projections and volume renderings a bit vague.
