· One solution. In this case the two equations describe lines that intersect at one particular point. Clearly this point is on both lines, and therefore its coordinates (x, y) will satisfy the equation of either line. Thus the pair (x, y) is the one and only solution to the system of equations. 2. Dependent Equations

You're going to have one solution if you can, by solving the equation, come up with something like x is equal to some number. Let's say x is equal to-- if I want to say the abstract-- x is equal to a . Or if we actually were to solve it, we'd get something like x equals 5 or 10 or negative π -- whatever it might be. But if you could actually solve for a specific x , then you have one solution. So this is one solution, just like that.
