Geologists like me teach students and conduct research with microscopes called "polarizing" or "pol" for short. After development in the late 19th century, pol scopes became critical tools for studying the minerals and structures of rocks (our Earth), which can tell us much about how they

formed.

Polarizing Petrographic Microscopes - Earth-2-Geologists

Does the space junk orbiting Earth have any effect on the amount of solar energy reaching the surface of our planet, either by absorbing or reflecting it?

Quantum computing is the use of quantum-mechanical phenomena such as superposition and entanglement to perform computation. A quantum computer is used to perform such computation, which can be implemented theoretically or physically.: I-5. The field of quantum computing is actually a sub-field of quantum information science, which includes quantum cryptography and quantum communication.

Quantum computing - Wikipedia

X-rays make up X-radiation, a form of electromagnetic radiation. Most X-rays have a wavelength ranging from 0.01 to 10 nanometers, corresponding to frequencies in the range 30 petahertz to 30 exahertz (3×10^{16} Hz to 3×10^{19} Hz) and energies in the range 100 eV to 100 keV. X-ray wavelengths are shorter than those of UV rays and typically longer than those of gamma rays.

X-ray - Wikipedia
