literal quotes. Literal quotes (aka single quotes) create a word with exactly the characters shown in the source code. For the shells other than fish there is no escaping mechanism and hence no way to put single quotes in the word.. Literal quotes can be used to put characters that the shell lexer uses to distinguish words inside a single word.

Unix Shells: Bash, Fish, Ksh, Tcsh, Zsh - Hyperpolyglot

Background execution. Background execution allows a shell to run a command in background. POSIX shells and other Unix shells allow background execution by using the & character and the end of command, and in PowerShell you can use Start-Process or Start-Job commands.. Completions
