Our work focuses on research and discovery at the interface of macroecology, conservation, and global change. It starts with discovery but is about more than that - we are looking for ways to use discovery to improve conservation prospects for biological diversity during the current period of rapid human-induced climate change and habitat loss and improve predictions of vector borne disease ...

1. Introduction. Plastic debris is ubiquitously present in the world's seas and oceans. Although the consequences of the plastic macrodebris are well known for (vertebrate) wildlife (Derraik, 2002, GEF, 2012), there is increasing evidence that microplastics (plastic particles < 1 mm) also exert an impact on marine biota. Microplastics are the products of the degradation of larger plastic items ...

The most prolific evidence of the Industrial Revolution's impact on the modern world is seen in the worldwide human population growth. Humans have been around for about 2.2 million years. By the dawn of the first millennium AD, estimates place the total world (modern) human population at between 150 - 200 million, and 300 million in the year 1,000.
