A job safety analysis (JSA) is a procedure which helps integrate accepted safety and health principles and practices into a particular task or job operation. In a JSA, each basic step of the job is to identify potential hazards and to recommend the safest way to do the job. Other terms used to describe this procedure are job hazard analysis (JHA) and job hazard breakdown.

Job Safety Analysis - EHS DB.com

The goal of ergonomics (i.e. the scientific study of people at work) is to prevent soft tissue injuries and musculoskeletal disorders (MSDs) caused by sudden or sustained exposure to force, vibration, repetitive motion, and awkward posture. To create an ergonomically sound work environment, NIOSH ...

Ergonomics and Musculoskeletal Disorders | NIOSH | CDC

Q: What is the Strain Index? A: The Strain Index is a tool used to evaluate a job's level of risk for developing a disorder of the hand, wrist, forearm, or elbow. The analyst evaluates six task variables (intensity of exertion, duration of exertion, exertions per minute, hand/wrist posture, speed of work, and duration of task per day).

The Strain Index Job Analysis Method: Q & A | Sustainable ...

Elsewhere on the HSE website there are hints about a technique that will assist with hazard identification. In the Safety Report Assessment Guides for major accident hazard sites, the HSE lists job safety analysis (JSA) as an acceptable method. A similar term crops up in two research reports for the executive. One describes a toolkit of techniques to support behaviour change and worker ...
