Quantum gravity (QG) is a field of theoretical physics that seeks to describe gravity according to the principles of quantum mechanics, and where quantum effects cannot be ignored, such as near compact astrophysical objects where the effects of gravity are strong.. The current understanding of gravity is based on Albert Einstein's general theory of relativity, which is formulated within the ...

This section relates a historically important n-body problem solution after simplifying assumptions were made.. In the past not much was known about the n-body problem for  $n \geq 3$ . The case  $n = 3$  has been the most studied. Many earlier attempts to understand the Three-body problem were quantitative, aiming at finding explicit solutions for special situations.

If the angle given is actually a reference angle,  $\alpha$ , to the nearest x-axis instead of the directional angle  $\theta$  (which is always measured counterclockwise from the positive x-axis), you must decide whether  $F_x$  and  $F_y$  are negative. Remember that forces are measured in newtons.

FTL. Faster than light. This is by far the most important item of HANDWAVIUM technology in Space SF, and is absolutely necessary for the communications, TRADE, and WARFARE of the KNOWN GALAXY. No one, after all, wants to take decades or centuries to get anywhere. For this reason, even HARD SF usually makes an exception for FTL. You just can't leave home without it.

We can see from this graph that when the neuron's output is close to \$1\$, the curve gets very flat, and so  $\sigma'(z)$  gets very small. Equations (55) and (56) then tell us that  $\partial C / \partial w$  and  $\partial C / \partial b$  get very small. This is the origin of the learning slowdown.
