When a population arrives at the point where its size remains stable, it has reached the carrying capacity of the environment. The carrying capacity is the greatest number of individuals a given environment can sustain. Competition for resources among members of a population (intraspecific competition) places limits on population size.

Dynamic Change. Like the individual organism, the population is a real and functional unit in biology. Defined as groups of organisms that are genetically and spatially distinct from other such groups, the population is the fundamental unit of evolution. Populations are dynamic, they grow, decline, colonize new populations, and go extinct.

Evolutionary Trade-offs. While there are many factors that can affect allele proportions in a population, selection is thought to be among the most powerful. Selection effectively shapes the heritable physiology, morphology, and behaviors of populations through differential reproduction among individuals.

### **Selection - Virtual Biology Lab**

This lab uses the glencoe simulator, Virtual Lab: Population Biology to collect data on two populations of paramecium, P. caudatum and P. aurelia.. Though the simulator doesn't expressly say it, the activity illustrates the competitive exclusion principle by showing students how each population behaves when grown alone or when mixed together.
