Dipstick Testing. Urine samples are initially screened with dipsticks. Performing microscopic analysis on only dipstick positive urine samples is cost effective when the patient population being tested has a low incidence of potential disease.

Learn about all of the tests included in routine urinalysis

Q.1- What are the conditions in which urine gives a positive reaction with Benedict's qualitative reagent? Answer- Benedict's test gives a positive reaction with all reducing agents, which may be sugars or other agents. In urine, the commonly found reducing sugars are- Glucose, Fructose, Galactose, Lactose and Pentoses.

Abnormal Urine | Biochemistry for Medics - Lecture Notes

Urine Dipstick Test. The urine dipstick test is a common over-the-counter urine test that can be performed at the comfort of a person's home to test the contents of a person's urine for various chemical and acid imbalances. It gives a lot of information without having to go through doctors and medical facilities.

Urine Dipstick Test - Urinalysis

A urinalysis is a group of physical, chemical, and microscopic tests. The tests detect and/or measure several substances in the urine, such as byproducts of normal and abnormal metabolism, cells, cellular fragments, and bacteria.. Urine is produced by the kidneys, two fist-sized organs located on either side of the spine at the bottom of the ribcage.

Urinalysis - Understand the Test & Your Results

Urine is the product of the kidneys, which is produced to eliminate the waste products of metabolism, manage body fluid balance, & maintain acid-base balance. The blood is first filtered by the kidneys, and the composition of the resulting fluid is then altered depending on the body's needs. It is composed of mostly water, and breakdown products from blood cells impart the yellow color (urobilin).
