In chemistry, the mass concentration  $\rho_i$  (or  $\gamma_i$ ) is defined as the mass of a constituent  $m_i$  divided by the volume of the mixture  $V$ :  $\rho_i = \frac{m_i}{V}$ . For a pure chemical the mass concentration equals its density (mass divided by volume); thus the mass concentration of a component in a mixture can be called the density of a component in a mixture. This explains the usage of  $\rho$  (the lower case Greek letter ...

Because percent solutions can be expressed in three different ways, it is imperative that the type of percent solution be explicitly stated. If this information is not provided, the end user is left to "guess" whether w/v %, w/w %, or v/v % was used.

Weight/Volume Percent. Another variation on percentage concentration is weight/volume percent or mass/volume percent. This variation measures the amount of solute in grams but measures the amount of solution in milliliters. An example would be a 5%(w/v) NaCl solution.
