### Tasks in Visual Studio Code

The OpenAPI 'Swagger' Specification defines a protocol that allows applications to discover, and generate documentation of methods, parameters and models of REST APIs. This provides a way for any software to identify the features of a REST API. It does for REST APIs what WSDL (Web Service Description Language) did for web services. Visual Studio now provides it to support proxy creation ...

### Basic Database Continuous Integration and Delivery (CI/CD) ...

One of the concerns that I have repeatedly heard from customers when we talk about Azure is application lifecycle management. If you do most of your resource deployment and management using the Azure Portal, then you probably picture a very manual migration process if you wanted to move your app from dev to test, or if you wanted to share your app with another developer.

### Deploying and Managing Logic Apps using Visual Studio Team ...

By Tony Lugg . Good article. I'm not using MVC but my main project is a web application with Web API. The problem is, the build process does not take place in the Web API project unless I make a change in that project or explicitly tell it to rebuild, i.e. F5 sees no changes in the Web API project and so the build does not happen, and consequently no pre-build to build and copy my Angular ...
