In this lesson you will learn how to write equations of ellipses and graphs of ellipses will be compared with their equations. Definition: An ellipse is all points found by keeping the sum of the distances from two points (each of which is called a focus of the ellipse) constant. The midpoint of the segment connecting the foci is the center of the ellipse.

Driving distance between cities: a real-world example. Let's take a look of one of the applications of the distance calculator. You can use it together with the gas calculator for making road trip plans. Suppose you are traveling between cities A and B, and the only stop is in city C, with a route A to B perpendicular to route B to C.

Crazy Tosser: My guess is that it's derived using the unit circle equation $y=\sqrt{1-x^2}$, integrating it from 0 to 1 and multiplying by 4. Since direct integration is (I think) impossible, we use different methods of finding areas under a curve.

How is pi derived? | Physics Forums

With respect to the base plane the slope of a face ($2\sqrt{2}$) is twice that of an edge ($\sqrt{2}$), corresponding to the fact that the horizontal distance covered from the base to the apex along an edge is twice that along the median of a face. In other words, if C is the centroid of the base, the distance from C to a vertex of the base is twice that from C to the midpoint of an edge of the base.

§111.38. Implementation of Texas Essential Knowledge and Skills for Mathematics, High School, Adopted 2012. (a) The provisions of §§111.39-111.45 of this subchapter shall be implemented by school districts.

Chapter 111. Subchapter C - Texas Education Agency

Thus far in this unit, our focus has been the reflection of light off flat surfaces and the formation of images by plane mirrors. In Lessons 3 and 4 we will turn our attention to the topic of curved mirrors, and specifically curved mirrors that have a spherical shape. Such mirrors are called spherical mirrors. The two types of spherical mirrors are shown in the diagram on the right.
