The 8018 (for A and AAAA) and 8012s (for PTR) can get triggered via a number of different scenarios. If you do a Wireshark trace (filter using 'dns.flags.opcode == 0x5' - filtering for dynamic updates), you'll see that the client attempts to do a dynamic update (first un-securely, and then securely if required by the zone), but the server is the one that refuses the request.
