Information systems (IS) are formal, sociotechnical, organizational systems designed to collect, process, store, and distribute information. In a sociotechnical perspective, information systems are composed by four components: task, people, structure (or roles), and technology.. A computer information system is a system composed of people and computers that processes or interprets information.

Physicians and researchers are interested in comorbidity because of its effect on quality of life (QOL) and on RA prognosis and outcome. Using the NDB index of comorbid conditions (an index of how medically ill the patient is), the number of comorbid conditions is directly related to QOL as measured by the EuroQoL ().2, 3 Although it is common to think of functional status in RA as being ...
