Pyroclastic flow entering the ocean, Montserrat 1996 Pyroclastic Flows These hot, fast moving mixtures of ash, rock fragments and gas flow from a collapsed eruption column or lava dome, travel down valleys and cause total devastation of the area over which they flow.

The University of the West Indies Seismic Research Centre

This photo shows the large white billowing eruption plume from Rabaul being carried in a westerly direction by the weak prevailing winds. At the base of the eruption column is a layer of yellow-brown ash being distributed by lower level winds. A sharp boundary moving outward from the center of the eruption in the lower cloud is a pulse of laterally-moving ash which results from a volcanic ...

How do volcanoes affect the atmosphere and climate ...

Plants are destroyed over a wide area, during an eruption. The good thing is that volcanic soil is very rich, so once everything cools off, plants can make a big comeback!

How do volcanoes affect plants and animals? | Volcano ...

The U.S. Geological Survey estimates that there are about 65 active volcanoes in the United States and its territories. The Dynamic maps viewer (shown at right) provides an interactive presentation of potentially active volcanoes in the 48 contiguous states..
