Which States Of Matter Can

Five phases. There are five known phases, or states, of matter: solids, liquids, gases, plasma and Bose-Einstein condensates. The main difference in the structures of each state is in the densities of the particles. Solids. In a solid, particles are packed tightly together so they are unable to move about very much.

Matter: Definition & the Five States of Matter - Live Science

Matter that feels hard and maintains a fixed shape is called a solid; matter that feels wet and maintains its volume but not its shape is called a liquid. Matter that can change both shape and volume is called a gas. Some introductory chemistry texts name solids, liquids, and gasses as the three states of matter,...

States of Matter: Solid, Liquid, Gas, and Plasma

State of matter. In physics, a state of matter is one of the distinct forms in which matter can exist. Four states of matter are observable in everyday life: solid, liquid, gas, and plasma. Many other states are known to exist, such as glass or liquid crystal, and some only exist under extreme conditions,...

State of matter - Wikipedia

Matter takes many shapes, but most of us are familiar with the basic three states - solid, liquid, and gas. Now, for the first time, scientists have discovered that it's possible for matter to exist in two of these states at once.

A New 'State' of Matter Can Be Solid And Liquid at The ...

The three states of matter are the three distinct physical forms that matter can take in most environments: solid, liquid, and gas. In extreme environments, other states may be present, such as plasma, Bose-Einstein condensates, and neutron stars. Further states, such as quark-gluon plasmas, are also believed to be possible.

Three States of Matter | Introduction to Chemistry

States of Matter. When an object is a solid, its molecules are arranged in a pattern and can't move around much. In a liquid, molecules are farther apart, can move around, and are not arranged in a pattern. The movement is what makes a liquid fluid (or pourable) and take the shape of a container it is in.
