Solved games. Jing Yang has demonstrated a winning strategy (weak solution) for board sizes  $7 \times 7$ ,  $8 \times 8$  and  $9 \times 9$ . A winning strategy for Hex with swapping is known for the  $7 \times 7$  board. Strongly solving Hex on an  $N \times N$  board is unlikely as the problem has been shown to be PSPACE-complete. If Hex is played on an  $N \times \dots$

So hard, in fact, that there's literally a whole Wikipedia page dedicated to unsolved mathematical problems, despite some of the greatest minds in the world working on them around the clock. But as Avery Thompson points out at Popular Mechanics , from the outset at least, some of these problems seem surprisingly simple - so simple, in fact, that anyone with some basic maths knowledge can understand them... including us.

### **10 Greatest Unsolved Mysteries In Physics | IFLScience**

In cooperative games with externalities, there are possibilities of multiple coalition formation and multiple payoffs to the same coalition in a game which causes many limitations to the way we design and analyse a cooperative game. It is an open problem to develop a framework which properly accommodates this situation.

### **What are some unsolved problems in game theory? - Quora**

Related unsolved problem. This is known as the Inscribed Square Problem. Similar to the Collatz Conjecture, it is not known if a solution exists but, in certain cases - for example, if the curve is convex or piecewise smooth - it is known that you can always find a square.
