Windows Powershell In Action Bruce

PowerShell is a task automation and configuration management framework from Microsoft, consisting of a command-line shell and associated scripting language. Initially a Windows component only, known as Windows PowerShell, it was made open-source and cross-platform on 18 August 2016 with the introduction of PowerShell Core. The former is built on .NET Framework while the latter on .NET Core.

This section deals with the configuration of the time zone settings. On a local machine, these are configured in the Date & Time settings. Time zone settings are system-specific and not configured per-user (although you can redirect the local time zone in a remote session).. The time zone configuration is stored in the Windows registry in the HKEY_LOCAL_MACHINE hive.

Configuring the time zone and code page with Group Policy ...

The Windows platform for validating X.509 certificates has a feature I don't see many discuss — its robust logging subsystem. This allows a non-developer (and developers) to get insights into what is happening with applications interactions with CryptoAPI 2 and to some degree what is happening inside those APIs.

Advanced Troubleshooting of Certificate Validation Related ...
