Weimer And Vining Policy Analysis

Policy analysis is a technique used in public administration to enable civil servants, activists, and others to examine and evaluate the available options to implement the goals of laws and elected officials. The process is also used in the administration of large organizations with complex policies. It has been defined as the process of "determining which of various policies will achieve a ...

Project appraisal is the process of assessing, in a structured way, the case for proceeding with a project or proposal, or the project's viability. It often involves comparing various options, using economic appraisal or some other decision analysis technique. The entire project should be objectively appraised for the same feasibility study should be taken in its principal dimensions ...

Introduction to Monetary Valuation. Economic valuation of ecosystem services can provide decision makers with evidence of the social benefits provided by, and tradeoffs among, regulatory alternatives and other ecosystem management or policy actions. Valuation implies a systematic quantification of benefits and costs realized by society in commensurable (typically monetary) units, using methods ...

Abstract Policy practitioners apply tools and frameworks to policy challenges in order to improve social, economic, and environmental outcomes. Could such tools and frameworks be applied to improve the quality of policy design itself? In 2014, prompted by evidence of widespread inconsistency in the quality of policy advice being produced across agencies, the New Zealand Government launched the ...

The third limitation is the untested assumptions on which this approach is based. Social willingness to pay for health benefits is, conceptually, an appropriate way to define social value¹⁷ that could be informed by the results of non-market valuations based on revealed- and stated-preference approaches.^{18, 19} In using a cost-effectiveness threshold that is based on a country's per ...

where $\delta WTP/\delta p$ is the marginal rate at which individuals are willing to exchange wealth and risk. Equation (3) states that WTP is a function of lifetime utility divided by the expected marginal utility of consumption. WTP to reduce the risk of death depends on many factors, including age, income, and type of risk and death.

Global insect pollinator declines are caused by human behaviors of land uses, habitat alteration, pesticides, and others. Policies—as mutually agreed-upon limits to behaviors to achieve shared values—are necessary for addressing complex social-ecological problems like declines of insect pollinator diversity and abundance.
