Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...

Since prehistory humans have noticed the stars, of course. Over the course of a human life-time and even many generations don't seem to move much, except for the daily westward overall circling and the much slower overall motion due to the precession of the equinoxes. Both daily circling and precessions are physically caused by the motions of the Earth, of course---but this was not understood ...

I actually find the results of this poll exciting, and heartening. Things would be much more depressing in my view if physicists weren't thinking as much about this issue, or if a majority of physicists had one favorite interpretation of quantum mechanics without being able to adequately back up any interpretation at this time.
