Colloid: Short synonym for colloidal system. Colloidal: State of subdivision such that the molecules or polymolecular particles dispersed in a medium have at least one dimension between approximately 1 nm and 1 μ m, or that in a system discontinuities are found at distances of that order.

Colloid - Wikipedia

Colloid definition, a substance made up of a system of particles with linear dimensions in the range of about 10^{-7} to 5×10^{-5} cm dispersed in a continuous gaseous, liquid, or solid medium whose properties depend on the large specific surface area. The particles can be large molecules like proteins, or solid, liquid, or gaseous aggregates and they remain dispersed indefinitely.

Solutions and Mixtures Before we dive into solutions, let's separate solutions from other types of mixtures. Solutions are groups of molecules that are mixed and evenly distributed in a system. Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed.

Colloid crystals diversity defies description. Colloids are particles of nanometres (10⁻⁹ m) up to several micrometer dimensions (also commonly referred to as nanoparticles) that exist as suspensions in water or other solvents; and colloid crystals are literally crystals made of colloid particles arranged in an orderly way, like atoms in ordinary crystals.
