Samlam is a comprehensive tool for modeling and reasoning with Bayesian networks, developed in Java by the Automated Reasoning Group of Professor Adnan Darwiche at UCLA. Samiam includes two main components: a graphical user interface and a reasoning engine. The graphical interface allows users to develop Bayesian network models and to save them in a variety of formats.

The US EPA has funded the Institute for the Environment to establish a Community Modeling and Analysis System (CMAS). The CMAS is an approach to the development, application, and analysis of environmental models that leverages the community's complementary talents and resources in order to set new standards for quality in science and in the reliability of the application of the models.

CMAS: Community Modeling and Analysis System

In this course, instructor Haydn Thomas walks through the benefits of using process modeling to help make sense of your organization's business activities and see how they interconnect. Haydn defines business process modeling, covers the most commonly used business process modeling

diagrams—context, functional flow, cross-functional flow, and flowchart—and explains when, why, and how to ...

What is Tracker? Tracker is a free video analysis and modeling tool built on the Open Source Physics (OSP) Java framework. It is designed to be used in physics education. Tracker video modeling is a powerful way to combine videos with computer modeling. For more information see Particle Model Help or AAPT Summer Meeting posters Video Modeling (2008) and Video Modeling with Tracker (2009).
