

## *Unit 1 Uniform Motion Answers*

[Download File PDF](#)

*This is likewise one of the factors by obtaining the soft documents of this unit 1 uniform motion answers by online. You might not require more mature to spend to go to the book commencement as capably as search for them. In some cases, you likewise attain not discover the broadcast unit 1 uniform motion answers that you are looking for. It will very squander the time.*

*However below, bearing in mind you visit this web page, it will be in view of that categorically simple to get as with ease as download lead unit 1 uniform motion answers*

*It will not bow to many epoch as we tell before. You can reach it though statute something else at home and even in your workplace. fittingly easy! So, are you question? Just exercise just what we allow below as with ease as evaluation unit 1 uniform motion answers what you subsequent to to read!*

**Unit 1 Uniform Motion Answers**

In physics, acceleration is the rate of change of velocity of an object with respect to time. An object's acceleration is the net result of all forces acting on the object, as described by Newton's Second Law. The SI unit for acceleration is metre per second squared ( $\text{m}\cdot\text{s}^{-2}$ ). Accelerations are vector quantities (they have magnitude and direction) and add according to the parallelogram law.

**Acceleration - Wikipedia**

The calculation of kinetic energy uses the formula,  $KE = \frac{1}{2}mv^2$ . Identify the unit that is required for mass and velocity, respectively, to determine the kinetic energy in Joules.

**The calculation of kinetic energy uses the formula,  $KE = \frac{1}{2}mv^2$  ...**

A fictitious force (also called a pseudo force, d'Alembert force, or inertial force) is an apparent force that acts on all masses whose motion is described using a non-inertial frame of reference, such as a rotating reference frame. Examples are the forces that act on passengers in an accelerating or braking automobile, and the force that pushes objects toward the rim of a centrifuge.

**Fictitious force - Wikipedia**

The property a body has of resisting any change in its state of rest or uniform motion is called inertia. The inertia of a body is related to what we think of as the amount of matter it contains.

Answer: A, C, and D. Momentum can be thought of as mass in motion. An object has momentum if it has its mass in motion. It matters not whether the object is of large mass or small mass, moving with constant speed or accelerating; if the object is MOVING, then it has momentum!

What is infrared? Infrared energy is part of the electromagnetic spectrum and behaves similarly to visible light. It travels through space at the speed of light and can be reflected, refracted, absorbed, and emitted. The wavelength of IR energy is about an order of magnitude longer than visible light, between 0.7 and 1000  $\mu\text{m}$  (millionths of a meter).
