The nGBR is home to one of the largest green turtle populations in the world, with an estimated female population size in excess of 200,000 nesting females [1]. More than 90% of the females within the nGBR population nest at Raine Island and Moulter Cay (two small coral cays within the nGBR [2]). Despite the slightly increasing trend in the number of nesting females [3], early signs of population ...

Fisheries science is the academic discipline of managing and understanding fisheries. It is a multidisciplinary science, which draws on the disciplines of limnology, oceanography, freshwater biology, marine biology, conservation, ecology, population dynamics, economics and management to attempt to provide an integrated picture of fisheries. In some cases new disciplines have emerged, as in the ...

Environmental determinism (also known as climatic determinism or geographical determinism) is the study of how the physical environment predisposes societies and states towards particular development trajectories. Nineteenth-century approaches held that climate and terrain largely determined human activity and psychology, and it was associated with institutionalized racism and eugenics.

Plastic contamination is an increasing environmental problem in marine systems where it has spread globally to even the most remote habitats. Plastic pieces in smaller size scales, microplastics (particles <5 mm), have reached high densities (e.g., 100 000 items per m<sup>3</sup>) in waters and sediments, and are interacting with organisms and the environment in a variety of ways.
