The mathematics of general relativity are complex. In Newton's theories of motion, an object's length and the rate at which time passes remain constant while the object accelerates, meaning that many problems in Newtonian mechanics may be solved by algebra alone. In relativity, however, an object's length and the rate at which time passes both change appreciably as the object's speed ...

A few observations: 1) The evaluation of UN IPCC climate models' handling of radiation forcing and response at the surface shows us what we already intuit: Each modeling group makes up its own physics rules and parameterizations and there is no consistency in their "science."
