Semantic gradients are a way to broaden and deepen students' understanding of related words. Students consider a continuum of words by order of degree. Semantic gradients often begin with antonyms, or opposites, at each end of the continuum. This strategy helps students distinguish between shades of meaning. By enhancing their vocabulary, students can be more precise and

A column-oriented DBMS (or columnar database management system) is a database management system (DBMS) that stores data tables by column rather than by row. Practical use of a column store versus a row store differs little in the relational DBMS world. Both columnar and row databases can use traditional database query languages like SQL to load data and perform queries.

Column-oriented DBMS - Wikipedia

Abstract. YAML™ (rhymes with “ camel ”) is a human-friendly, cross language, Unicode based data serialization language designed around the common native data types of agile programming languages. It is broadly useful for programming needs ranging from configuration files to Internet messaging to object persistence to data auditing.
