Vibration is a mechanical phenomenon whereby oscillations occur about an equilibrium point. The word comes from Latin vibrationem ("shaking, brandishing"). The oscillations may be periodic, such as the motion of a pendulum—or random, such as the movement of a tire on a gravel road.. We have observed that an increase in the tension of a string causes an increase in the velocity that waves travel on the string. In this activity we will examine the precise relationship between tension (T) the force applied to the string, the wave speed (v w) and the linear mass density of the string ($\mu = m/L$ which is measured in kg/m).

The problem statement asks us to determine the length of the guitar string. From the graphic above, the only means of finding the length of the string is from knowledge of the wavelength. But the wavelength is not known. However, the frequency and speed are given, so one can use the wave equation ($\text{speed} = \text{frequency} \cdot \text{wavelength}$) and knowledge of the speed and frequency to determine the ...
