640x480 "VGA" resolution is the lowest-common-denominator - by definition all PC's, graphics adapters and monitors must support at least VGA. Because it's the one thing that can be counted on to work, and always work regardless of your hardware selection, it's often used as the fallback when troubleshooting, or the default if your computer doesn't know it can do any better.

### **Why is 640x480 my only resolution option? - Ask Leo**

i am having a strange problem on my PC every now and again (the frequency of it happening is random) my monitor keeps doing a jump which i can only describe as looking similar to a hiccup while not frequent enough to be unbearable its still annoying also very rarely the computer screen flashes a green color for some reason.

(In Windows 7, right-click on your desktop and click Screen Resolution. Click Make text and other items larger or smaller for a roughly equivalent setting: DPI.). This setting changes the size of everything, including text. For comparison, here are 150% (the default/recommended setting for my display) and 250% side by side (click the image for the larger or full-sized version).

### **How Can I Make the Text on My Screen Larger? - Ask Leo!**

Major causes. The most common causes for the fabled "blue screen of death" fall into four general buckets. 1. New Hardware. While the hardware can sometimes be bad, the real culprit is typically outdated, or just buggy, drivers.
