For calculations based on Inductive Reactance, you firstly need to think about the information on Reactance & Resistance in the introduction to this module to learn about the differences between reactance and resistance. For calculations you can choose which formula to use for inductive reactance, either $2\pi fL$ or ωL , but $2\pi fL$ is more commonly used, (one reason being that scientific ...

A back-of-the-envelope calculation is a rough calculation, typically jotted down on any available scrap of paper such as an envelope. It is more than a guess but less than an accurate calculation or mathematical proof. The defining characteristic of back-of-the-envelope calculations is the use of simplified assumptions. A similar phrase in the U.S. is "back of a napkin", also used in the ...

In SAP Analytics Cloud, calculations use formulas to create new measures based on your business data. You can add calculations in the modeling stage by adding formulas to your model, or you can create in-story calculations. In-story calculations create story-specific measures that can be added to any chart within your story.

Free Space Loss Wireless Calculator - Power loss over distance: Free Space Loss is the loss of power over distance (assuming no FRESNEL Effect and nothing in the way). This is a very idealised calculation and in practice everything interferes with the signal but this will give you a reasonable approximation of the actual loss over distance.

The problem statement asks us to determine the frequency (f) value. From the graphic above, the only means of finding the frequency is to use the wave equation ($\text{speed} = \text{frequency} \cdot \text{wavelength}$) and knowledge of the speed and wavelength. The speed is given, but wavelength is not known. If the wavelength could be found, then the frequency could be easily calculated.
