In 3-dimensional geometry, for a finite planar surface of scalar area S and unit normal n̂, the vector area S is defined as the unit normal scaled by the area: = ^ For an orientable surface S composed of a set S i of flat facet areas, the vector area of the surface is given by = ∑ ^ where n̂ i is the unit normal vector to the area S i.. For bounded, oriented curved surfaces that are ...

In mathematics, a unit vector in a normed vector space is a vector (often a spatial vector) of length 1. A unit vector is often denoted by a lowercase letter with a circumflex, or "hat": ^ (pronounced "i-hat"). The term direction vector is used to describe a unit vector being used to represent spatial direction, and such quantities are commonly denoted as d.

Determine the density of the mass flow at the cross sectional area. If the flow is incompressible, the density will be constant throughout. If you don't already have the density available, as is common in theoretical problems, you may need to use certain lab equipment such as thermocouples or pitot tubes to measure the temperature (T) and pressure (p) at the point you wish to measure mass flux.
