To expand on the answer by bradtgmurray, you may want to make one exception to the pure virtual method list of your interface by adding a virtual destructor.This allows you to pass pointer ownership to another party without exposing the concrete derived class. The destructor doesn't have to do anything, because the interface doesn't have any concrete members.

inheritance - How do you declare an interface in C++ ...
What's the difference between an interface and an abstract class in Java? It's best to start answering this question with a brief definition of abstract classes and interfaces and then explore the differences between the two. A class must be declared abstract when it has one or more abstract methods. A method is declared abstract […]
