Vector. A vector is formally defined as an element of a vector space.In the commonly encountered vector space (i.e., Euclidean n-space), a vector is given by coordinates and can be specified as .Vectors are sometimes referred to by the number of coordinates they have, so a 2-dimensional vector is often called a two-vector, an -dimensional vector is often called an n-vector, and so on.

The Gödel metric is an exact solution of the Einstein field equations in which the stress–energy tensor contains two terms, the first representing the matter density of a homogeneous distribution of swirling dust particles (dust solution), and the second associated with a nonzero cosmological constant (see lambdavacuum solution).It is also known as the Gödel solution or Gödel universe.
